Education

2026 - Now PhD in Computer Science and Engineering, Sabancı University / Istanbul, Turkey
2023 - 2026 MSc in Data Science, Sabancı University / Istanbul, Turkey
2016 - 2022 BSc in Molecular Biology and Genetics, Middle East Technical University (METU)/ Ankara, Turkey

Experience

2025 - Now **Lead Developer** at Beespenser Technology Inc.: Built BeeSpenser App end-to-end: a Tauri desktop app pairing a React + Vite frontend with FastAPI backend and a Node.js sidecar, orchestrated by a Rust host process that manages sidecar lifecycle and serial teardown. Backend spans real-time G-code streaming to Marlin firmware (pyserial/printcore, WebSocket telemetry), a geometry engine, with alignment and surface-following abilities. Rounded out with a versioned SQLite store, and ADR/glossary-documented architecture.

2023 - Now **Teaching Assistant** at Sabancı University: Responsibilities included guiding students through RAG implementations, deployment, agent-calling, and fine-tuning of LLMs, and working with vector databases; explaining ML & DL algorithms; guiding Big Data processing applications; helping students to develop a strong foundation for data science. Courses included CS455/555 - Large Language Models, CS528 - Big Data Processing, CS412 - Machine Learning and DSA210 - Introduction to Data Science

2022 Bioinformatician/Python Developer at **Bioeksen R&D Technologies**

2018 Director at **"*The Company*" Musical Theatre Community**

Thesis

2026 **Generating Synergistic Drug Partners Using Chemical Language Models:** Conducting fine-tuning on Chemical LMs to steer the conditional generation toward the desired region of training space. The project focused on utilizing generative models to design molecules with desired properties.

Projects

2024 **Image-to-Image Translation with Domain Adaptation for Image Segmentation:** Improved real-life image segmentation by using synthetic images from computer games. Domain Adaptation and Image-to-Image translation techniques are used to utilize simulated data for real-life purposes.

2023 **Predicting Mechanism of Actions (MoAs):** A Kaggle Challenge solution is produced for improving the performance on a multilabel prediction problem of drug mechanism of action classification.

2022 **Models and Approach Analysis in Lung Cancer Detection:** A computer vision project focused on the classification of lung cancer tumor images. Responsibilities included performing data visualizations and training models to enhance detection accuracy.

2022 **Drug-target Interaction Prediction with Machine Learning Methods:** This project focused on improving the prediction of interactions between drugs and their biological targets. The work involved analyzing interaction data to develop models that more accurately identify potential drug-target pairs.

2021 **ERASMUS+ Internship - Refinement Learning with Deep Neural Network "*Prosit*":** Conducted during an ERASMUS+ internship at the Technical University of Munich (TUM), finetuned "Prosit" deep neural network, responsibilities included data cleaning, manipulation, and model training.

2018 **METU "*The Company*" Musical Theatre Community:** Scheduled an entire one-year theatre project, and directed two musicals with a team of 80+ people.

Technical

Languages	Python, C++, R, Bash, SQL, JavaScript, Gcode
Libraries & Tools	sklearn, Numpy, Pandas, PyTorch TensorFlow, Keras, PySpark (Apache), Git, Optuna, Make (Snakemake), Docker, SageMaker, Hugging Face, React, FastAPI, Copilot, Claude Code, CI/CD

Language Skills

Turkish – Native
English – Advanced

Selected Courses

Deep Learning, Natural Language Processing, Scalable Learning Systems, Machine Learning, Big Data Processing, Databases and Data Analysis Tools, Algorithms and Data Structures, Methods of Statistical Inference
